

BoM Engine

OVERVIEW

For engineers and approvers to take a Bill of Materials and easily visualize the made changes.

Complex Bill of Materials is put in a clean readable interface and allow to understand the changes that have been made.

Notification example

FEATURES AND FUNCTIONS

The Engine drives BoM comparison by displaying in a single interface two flattened Bills of Materials.

In order to allow the comparison of structures with many elements, the export is done using a queue then is made available to the user via a mail notification.

The navigation criteria for comparison is configurable.
